Oxygen Reserve Index™ (ORi™)

The First Noninvasive and Continuous Parameter to Provide Insight into a Patient's Oxygen Reserve

ORi with Masimo SET® Pulse Oximetry May Provide:

Clinical Application

- > In a study of 25 paediatric patients undergoing general anaesthesia with orotracheal intubation, researchers found that ORi detected impending desaturation a median of 31.5 seconds before noticeable changes in SpO₂ occurred.¹
- > In a study of 106 patients undergoing scheduled surgery in which arterial catheterization and intraoperative arterial blood gas analyses were planned, researchers found that decreases in ORi to near 0.24 may provide advance indication of falling PaO₂ approaching 100 mm Hg when SpO₂ is >98%.²

- > Advanced warning of impending desaturation, which may allow clinicians to intervene sooner

- > Insight into oxygen reserve when titrating patients who are receiving supplemental oxygen
